Urban Health - Fundamentals (*Online Course*)

Course Objectives

While urbanization is associated with improvements in health and development, it can also produce some negative consequences – unhealthy lifestyles, environmental degradation and social inequities. This situation is most problematic in developing countries, against a background of unplanned growth, struggling health systems and lack of commensurate basic services for many.

This online course aims to teach the fundamentals of Urban Health, especially applicable to low- and middle-income country settings. It is a basic level course and aims to introduce fundamental concepts of urban public health, and sensitise participants to the unique health problems in such settings.

Course details

This web-based course can be taken up at one's own free time and convenience. It provides an opportunity for busy practitioners, researchers and students who are unable to travel to learn and update their knowledge on Urban Health.

- ◆ The complete duration of this course is 10 hours but it may be completed over a period of one month
- ◆ Upon successful completion, participant will receive a Course Completion certificate from St John's Research Institute

Course Schedule

| 5 | Urban Health & Sustainable Development Goals | 100 min |

Feedback from participants

course content well organized and presented in an "easy-to-grasp" way

Content...not usually found in textbooks

Good use of case studies/detailed examples to explain concepts

Short video explanations embedded in the modules
